Site 1: EcoRI; Site 2: XhoI; The cDNA library was
constructed by Keliang Tang, and Robert Cole at Washington
University. cDNA was synthesized from Poly(A)+ mRNA using
an oligo-d(T) primer containing a XhoI site. Following
second strand synthesis, EcoRI adapters were ligated to
the cDNA, and products were size-selected on sephacryl
S500. The cDNA were directionally cloned into the
EcoRI/XhoI prepared pBluescript II SK+ vector, and
electroporated into ElectroTen Blue cells (Stratagene).
The library may contain a small percentage of host or
